Academic Projects

Title	:	**Water Quality Classification Using Machine Learning**
Platform	:	Google colab

Duration : 6 Months

Description	:	This project aims to build a machine learning model that can classify water as potable (safe to drink) or non-potable (unsafe) based on its quality attributes. The model uses data such as pH, hardness, dissolved solids, and other chemical properties to predict water safety.By analyzing these features, the project helps in assessing water quality and ensuring access to clean drinking water. The goal is to support efforts that protect public health by identifying safe and unsafe water sources efficiently.

Title	:	**Distributed Intelligence: Enhancing Financial Security Through Federated Learning**
Platform	:	Google colab

Duration : 12 Months

Description	:	This project aims to improve financial security in Smart Cities using Federated Learning, a method that allows data to stay private while still training powerful models. By using a multi-tier Federated Learning system, the project enhances privacy, scalability, and adaptability in financial data processing. It helps create a secure and intelligent financial environment without compromising sensitive information.
